Maintenance, Facilities and Service Management

Profile of the Company

Xetec are a Wicklow-based B2B software company providing a customisable software solution called FlexMaint™. FlexMaint™ is a cloud-based maintenance management software (CMMS) which allows clients to schedule and manage preventative maintenance, order and monitor stocks, generate work requests and much more all in one package.

They have been in operation since the early 2000s and have a strong market presence in this sector in Ireland and the UK. Xetec have been a Nimbus client for 2 years.

Problem to be Solved

Finding the required specialist architect and developer skills to enable us to streamline our service through code efficiency and continuous integration/delivery.

Finance the required work in the easiest way.

Meet our needs to expand our client base through optimising resource (server, databases, security) usage quickly with experienced expertise to minimise downtime with our main service.

Solve scheduling problems such as identifying the next maintenance date for a resource.
Innovative Solution

Nimbus introduced Xetec to the Enterprise Ireland Innovation Voucher scheme and helped in defining the application to speed things up. Nimbus had the correct skills and developer experience in house and guided the company to set up the correct proxy servers. This has enabled Xetec to provide a new level of functionality and security for customers. Maintaining their current customisable software offering and source the right solution in a timely manner.

Impact for the Company

Nimbus enabled us to streamline the usage of servers and understand how to set them up to fit into our model. This has helped to minimise server costs and ultimately streamline our Flexmaint product offering. We didn’t have access to this expertise in house so Nimbus helped step by step in this process.

All in all this new set up will help us to provide a new level of functionality and security for customers.

Client Testimonial

Paul Geoghegan
CEO/Director of Flexmaint

Nimbus allowed us to source and finance the developer skills required to minimise our server storage and advise on the best proxy set up. This has helped us to be more cost-effective in our operations. In 2020, we are continuing our relationship with Nimbus within the Enterprise Ireland Innovation Partnership framework to develop the next phase of our Flexmaint CMMS package.
